## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Response to Amendment***

1. Applicant's amendment filed 3/1/2004 has been entered and the finality of that action is withdrawn in view of the newly discovered prior art..

### ***Allowable Subject Matter***

2. The indicated allowability of claims 16, 17, 19-22 is withdrawn in view of the newly discovered reference(s) to Minakuchi et al. (US Patent No. 5,844,547. Rejections based on the newly cited reference(s) follow.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 16, 17 and 19-22 are rejected under 35 U.S.C. 102(e) as being anticipated by Minakuchi et al. (US Patent No. 5,844,547).

Art Unit: 2674

As to claims 15, 17 and 19-22, Minakuchi discloses a method for processing images, comprising: executing image processing to move an object to different positions on a display (see Figs. 6a, 6b); displaying an image based on the step of executing image processing; providing contact to a display by the operation of a player (e.g. the user using finger to move the object displaying on the screen), and generating a signal for computing a contact position when the contact has been made with the display such that the strength of the signal (e.g. pressure, see col. 7, line 65 to col. 8, line 2) depends on the contact position; computing the contact position based on the signal; and determining whether a desired positional relationship is established between the contact position and an object display position, wherein the executing step provides prescribed image processing of the object when it has been determined that the desired positional relationship has been established (see col. 4, line 41 to col. 5 line 10).

#### ***Allowable Subject Matter***

5. Claims 5-11 and 23-40 are allowed.

6. The following is a statement of reasons for the indication of allowable subject matter:

None of prior art references teaches or fairly suggest the limitations of "input means provided on a side of said display means and generating at least one signal for computing a contact position when said contact means is brought into contact with said display means, such that the strength of the at least one signal depends on the contact position" as recited in independent claim 5. Similar claimed limitations are also found in independent claim 23.
